

## Notes EDC Meeting 6/2/16

### **Please make the following changes to the Tshilo Dikotla EDC:**

1. Consent form – please add in grey instructions for all names to be in the format: LASTNAME, FIRSTNAME all capital letters
2. When I input information for maternal locator form (on dashboard directly or on the form) there is an error message:  
**ValidationError at /td/dashboard/maternal/maternal\_eligibility/6f2c3a8b-507c-4919-9755-3152c8a37bc5/appointments/ ['Expected hash prefix to be followed by a hash. Got something else or nothing']**
3. Antenatal Enrollment form Q#13 “(Interviewer) If HIV +VE, do records show that participant takes ARV’s?”. Please change this question to:  
  
***“(Interviewer) If HIV+ve, do records show that participant is taking, is prescribed, or will be prescribed ARVs (if newly diagnosed) during pregnancy?”***
4. Antenatal Enrollment form Q#14 “Has the participant been on the regimen for a valid period of time?”. Please delete this question in the Antenatal Enrollment form and move it to the Delivery Form so that the question reads:  
***“Has the participant been on the ART regimen for at least 4 weeks in pregnancy?”***  
**If no, this should trigger that the patient is ineligible and that an off study form needs to be completed.**
5. Please see revised Maternal Off Study Form\_2016.06.02 clean version where an additional reason for being off study has been placed “Mother took ART for less than 4 weeks”. This does not count against the accrual goal.
6. Antenatal Enrollment form – the LMP and EDD by LMP not calculating correctly. I'm getting an error message when I put in the following example (it is an inconsistent LMP and GA as of the day of the visit:  
  
Date of visit 2016-06-02  
LMP = 2015-11-04  
GA = 25  
  
AttributeError at /admin/td\_maternal/antenatalenrollment/add/  
'EnrollmentHelper' object has no attribute 'gestational\_age'
7. Can we just delete all the labs listed below under Antenatal Visit 1?

8. The Antenatal Visit allows one to click “DONE” when forms are still not completed in that visit

9. Ultrasound Initial Form –

Amniotic fluid volume variable: Please change the choices to:

“0=Normal, 1=Abnormal”

10. Delete Question #17 on Ultrasound Initial Form

11. Change the red error message for BPD values on Ultrasound Initial Form so that it indicates that values for BPD should be between 5-300
