Target version:			**Spent time:**	1.00 hour

Description

On this CRF,Q4 for reasons, please give us option to enter "other"
Example, if i decide not to do VL because mother is not B/feeding and was done last month, then i omit it clinically, i do not have any reason to select front he currently available menu.
This issue was resolved before but it has now resurfaced after deployment of Version 3 today

- Subject changed from blood CRF validations and addition of "other" reason to Blood CRF Validations and Addition of "Other" Reason

Hi Leslie,

I am writing to follow up on the status of this issue. Could you please provide a date for when the validation on Q3 & Q4 and the option of "other" for Q4 will be available on the test server for the team to UAT?

Thanks,
Justine

UAT'ed ans seems to be working fine for both maternal/infant bloods. we noticed that when we select "no" for Q3 (was a specimen drawn?), and enter a date/time drawn (Q6), we do not receive an error. This may be minor, but if a specimen is not drawn, should we be able to enter a date/time for the specimen draw?

In general, deploy this to live server!some control measures would be in place in clinic to monitor good use
