- File UAT feedback of add cont visit for infant PIDs on Redmine and Protocol test servers_2018.03.22.pdf added

- Status changed from Resolved to Feedback

For this issue, it was reported that the team could not save a continuation visit for an infant. So I UAT'ed the ability to add continuation visit for infant PIDs on both the "Redmine Issues" (for infants consented on v1) and "Protocol Changes" (for infants consented on both v1 and v3) test servers. I have attached a PDF that details the issues that were/were not resolved.

In summary, on the Protocol test server, I was able to add a continuation visit for an infant who consented on v3 (PID 418-2-10). However, I was not able to add a continuation visit for an infant who consented on v1 (PID 306-2-10); I received the same error "Appt is not new. Some CRFs have not been completed."

On the Redmine test server, I was not able to add a continuation visit for an infant who consented on v1 (PID 413-4-10); I received the same error "Appt is not new. Some Requisitions have not been completed."

- File UAT feedback of add cont visit for infant PIDs on Redmine and Protocol test servers_2018.03.26.pdf added

- Status changed from Resolved to Closed

I re-UAT'ed the ability to add continuation visit for infant PIDs on both the "Redmine Issues" (for infants consented on v1) and "Protocol Changes" (for infants consented on both v1 and v3) test servers. Issues reported on 3/22 have been resolved. Attached is a PDF of my UAT testing feedback. Ticket will be closed now.
