- Status changed from New to Feedback

This vaccine already exists as DPT (Diphtheria, Pertussis and Tetanus) on the system, according to the validations the vaccine is given to the infant at 2, 3 and 4 months of live. Are we adding an extra vaccine or this was a mistake? Let me know how to proceed. Thanks.

#3 - 12/06/2018 11:28 - Keolebogile Nicholas Mmasa

We want the Vaccine to read at DT (diphtheria and Tetanus)

The Botswana Immunisation schedule keeps changing and at 18mo, now they removed Pertusis vaccine to leave it as DT.
