Target version:		Spent time:	0.00 hour

Description

Creating ticket for current task to create an export file for storage samples in Senaite (including locator information).

Based on lab's feedback of initial storage file, DMC is working on:

1. Provision to allow samples to be moved within a sample container or between sample containers.
2. Provision to allow sample containers to be moved between containers/facilities.
3. Editing of IDs for freezers, boxes, racks.
4. Exporting stored specimens to create storage report.
5. Searching specimens in storage as well as storage boxes.

History

- Status changed from Feedback to In Progress

Per Ame's email on 12-May:

The following issues are updated on the test server and awaiting UAT by the lab. Lab will provide feedback to Ame and timelines will be updated accordingly:

1. Provision to allow samples to be moved within a sample container or between sample containers.
2. Add workflow transition to ship samples externally.
3. Remove containers and boxes from storage.

The following issues are pending on the DMC side:

1. Awaiting code review, before it can be updated to the test server for UAT.
2. The other is proving a bit complex than anticipated. We currently don't have a revised timeline on when this issue will be done for the reason that we are still reviewing the complexity of the issue as a team, but we don't anticipate that the issue will affect the goal we are trying to achieve with generating the storage export files.
