Description

If this REDMINE is duplicated please delete!

The previous amendment allowed for Cohort B and C to include all participants who are HEU, rather than previous ART-specific. Please fill the Cohort B and C (primary aims) with previous HEU participants until the sample size is filled.

For example, Cohort C target for HEU (or previously PI-exposed) is 100. There are currently 119 participants in Cohort C secondary aims. If any of the participants in the 119 were exposed to HIV in utero, they are eligible for Cohort C. Please refer to the protocol in the dropbox for clarification and reach out to me if you need more information!
