Description			
<p>Please see attached the CRFs for the new HIV testing and results for infants. This will require one CRF for all infants, and depending on what is selected on the first form, additional forms will be required (to describe test dates, location, and results).</p> <p>These can be found in EDC Spec Forms - CRFs --&gt; "HIV Testing for Child (separate CRFs)</p> <p>Thank you!</p>

Kindly allow Not applicable to be selected if child is not due for testing at Q8. Currently if Not applicable is selected the system does not allow and throws an error, see attached. tested with PID 0699-6-10

Note; 1.to UAT if test specific CRF is triggered after selecting the respective test

2. To test if the error message will be triggered in the scenario where the child is younger than the window of the visit selected. The error message should read as " test cannot be older than the child"

Uat'd with PID 0699-6-10;

1. When " No" is selected at Q3, edc throws a yellow screen instead of an error message-see attached

2. When more than 1 test is selected at Q4, the specific test CRF for the just added extra test is not triggered

3. Error message should be triggered if you select a test that is older than the age of the child-error message should read as " test cannot be older than the child", used PID 1083-0-10 to UAT this scenario.

NB; to test each specific test CRF

- File Results received and results pending.pdf added
- Status changed from Resolved to Feedback

If results are received at Q 7, the results cannot be pending at Q11. see attached scenario on PID 502-2-60.

Continuation visit not triggered when results were not received or they were pending.

Capturing results on a continuation visit is better other than capturing them on next scheduled because there is another chance that the infant has tested again, received results and have to be captured right there on that visit.

continuation visit (2001.1) was created to capture results, however EDC created two CRFs for 6-8 weeks and 9 months although the child is 4 months old, and the 6-8 weeks testing selected was at 2001 visit.

See attached.

**FEEDBACK FOR DMC**

1. child age to trigger CRF at a correct child age, and also aligning to a selected test at a certain age time point, eg: at birth, 6 weeks,,,,,9 months, 18 months.

2. On continuation visit, Q3 to Q6 should be pre filled from a scheduled visit before. eg, 2001 visit Q3-6 should be carried forward to 2001.1 visit Q3-Q6.

Passed

Unscheduled visit created automatically when results are not receive and pending on a scheduled visit.

Auto fill of last test date and location is working

validation when selecting test type date that is not aligning to the child age is working.

DMC to lock pre-filled responses otherwise closing the ticket.
