- Status changed from Resolved to Feedback

Tested with PID 0181-5 on both maternal and child. The pending results functionality is working fine; DMC has placed a notification to alert the clinic not to save the CRF without attending the pending results section. Team to update the results if they are available otherwise if they are still pending they can click on "ok" to proceed, there is no need to click pending at the pending results section. The functionality has to exist until the results are captured and this has been tested too and working fine.

Pending task: DMC to re-word the notification to read as;

There are PENDING results from previous visit/s. Do you want to proceed?

- Status changed from Resolved to Closed

1. last visit Pending results table appears at the top
2. It disappears when results are available and captured
3. The previous visit results get updated when table result is updated
4. The table persists when results are still pending with confirmatory message mentioned above.
